

Just Announced!

Precision Motion Platform Design On-Site Seminars

Want to enhance your company's knowledge of precision motion systems? No longer does it take years to develop the internal expertise in motion platform design and selection. ***Advanced Motion Concepts, Inc.*** has shortened the motion learning curve with *two new and unique seminars*:

Precision Linear Motion Design I:

A comprehensive overview of precision motion design. Using a systems level approach this seminar covers all critical motion specifications and reviews both existing and emerging technologies for compatibility with your specific performance goals.

Precision Linear Motion Design II:

An in-depth, analytical seminar that covers the performance equations, charts and examples which are the foundation of all precision motion design.

Seminar Benefits Include:

- *Reduce costs by not over-specifying motion requirements*
- *Increase engineering productivity in a matter of weeks, not months*
- *Significantly decrease overall motion platform development time*

These 1-day seminars are given at your location and presented by Tom Radigan, a recognized industry professional, formerly with three major suppliers of precision motion systems; Anorad Corporation, Danaher Precision Systems (NEAT) and Dover Instrument Corporation.
